**OSHA SILICA
REGULATION GUIDE**

Core Drills

What is silica dust?

Silica dust is what is produced when concrete, bricks, blocks, etc are cut, and while it might seem harmless, it contains crystalline silica. The existence of crystalline silica and the hazards it can cause to a worker's body – silicosis, chronic obstructive pulmonary disease and kidney disease – has been known for decades. That is why Husqvarna Construction Products has been developing solutions to control dust for decades.

Since OSHA released the final ruling on crystalline silica exposure on March 24, 2016, how to control this dust has been a major concern for contractors. Mostly because the ruling places a lot of weight on the contractor's shoulders, but Husqvarna is here to support you with information and products to assist with compliance.

We always work towards finding the best solution for our customers – from both an efficiency standpoint and from a worker's view. OSHA has been working on a final ruling for the past several years, and since the first ruling on silica exposure Husqvarna Construction Products has been working to develop ways to suppress the crystalline silica and keep workers more safe.

This document will help guide you through how our products will help meet and/or exceed the OSHA rules, keeping you in compliance.

For more information on OSHA
silica exposure guidelines visit:

<https://www.osha.gov/silica/>

START DATE: September 23, 2017

The final OSHA ruling revises the amount of crystalline silica a worker should be exposed to. The key takeaways of the ruling include:

- The permissible exposure limit will be set at 50 micrograms per cubic meter of air, averaged over an eight hour shift.
- ***Employers will be required to take measures to control silica, either through using water, dust collection systems, ventilation or providing respirators.*** Employers will also be required to limit the amount of time a worker can be exposed to hazardous environments, write an exposure control plan, designate a competent person, offer medical exams to highly exposed workers and train workers on the risks and how to avoid silica dust.

Penalty Amounts Adjusted for Inflation as of January 13, 2017

TYPE OF VIOLATION	MAXIMUM PENALTY
SERIOUS/OTHER THAN SERIOUS POSTING REQUIREMENTS	\$12,675.00 per violation
FAILURE TO ABATE	\$12,675.00 per day beyond abatement date
WILLFUL OR REPEATED VIOLATIONS	\$126,749.00 per violation

Penalty amounts listed above may change.

What does OSHA require from you?

FROM TABLE 1 §29 CFR 1926.1153			
Equipment/ Task	Engineering & work practice control method	Required respiratory protection and minimum Assigned protection factor (apf)	
		Less than or equal to 4 hours/shift	Greater than 4 hours/ shift
(vi) Rig-mounted core saws or drills	Use tool equipped with integrated water delivery system that supplies water to cutting surface. Operate and maintain tool in accordance with manufacturer's instructions to minimize dust emissions	None	None

How Husqvarna can help you meet requirements:

RECOMMENDED CORE DRILLING EQUIPMENT

Our wide range of handheld heavy-duty machines includes petrol, hydraulic, pneumatic and electric cutters. You can always find a perfect machine and tool for any challenge, so you can work with high precision, less effort and optimal efficiency.

Core Drill Equipment

OSHA Compliance Cross Reference

Type	Models	OSHA TABLE 1 Recommended Dust Suppression	Feature	Recommended Accessories or Equipment	Additional Dust Control
HANDHELD	DM 220*	Dust shroud and collection	DM 200 integrated dust shroud	S 13 Dust Collector Slurry/Vacuum Rings Husqvarna Dri-Bits	Water
	DM 230				
RIG MOUNTED	DM 180	Water	Water attachment and adjustable valve for pressurized water	WT 15 PWT 15 Slurry/Vacuum Rings	Dry cutting with Vac
	DM 280				
	DM 340				
	DM 650				

*Additional engineering controls to reduce exposure: Objective data testing for DM 220 handheld drill with Dri Bits™ and vac system (in progress)
